Company Snapshot: T- Rex Is...

- ▶ **An Innovative NGIT Provider:** a leading solutions provider of innovative and modernizing Next Generation IT capabilities and enabling skills to the federal government
- ▶ **A first to market in migrating large federal mission applications and data** into a citizen-facing public cloud, giving the Company the capabilities and past performance to bid and win future NGIT opportunities in adjacent federal agencies
- ▶ **A Prime Contractor on 2020 Census,** one of the largest (scale) and most complex mission critical cloud/cyber/data analytics integration projects within the federal government

- ▶ **Integrated 52 mission-critical systems comprised of 200+ applications** operating in a hybrid hyper-converged data center and Amazon Web Service ("AWS") public facing GovCloud protected by a world class active cyber defense (ACD) solution. Also includes a VDI-based Office 365 solution supporting 40k+ users and MS Azure AD managing 350k+ mobile users

Achievements & Partnerships

Silver Data Analytics
Silver Application Development
Silver Data Platform

Advanced Consulting Partner
Public Sector Partner

Company Info

- **Established:** 1999
- **Legal Structure:** LLC
- **Headquarters:** Greenbelt, MD
- **8(a)/HUBZone & SDVOSB Joint Ventures:** Ability to deliver services as a small business concern
- **Prime/Sub (09/20):** 98.5% Prime
- **Backlog (09/20):** \$341.6MM

Prime Vehicles/BPAs:

- GSA Schedule 70
- USDA Cloud COE BPA
- Dept of Commerce ESF

What we will cover

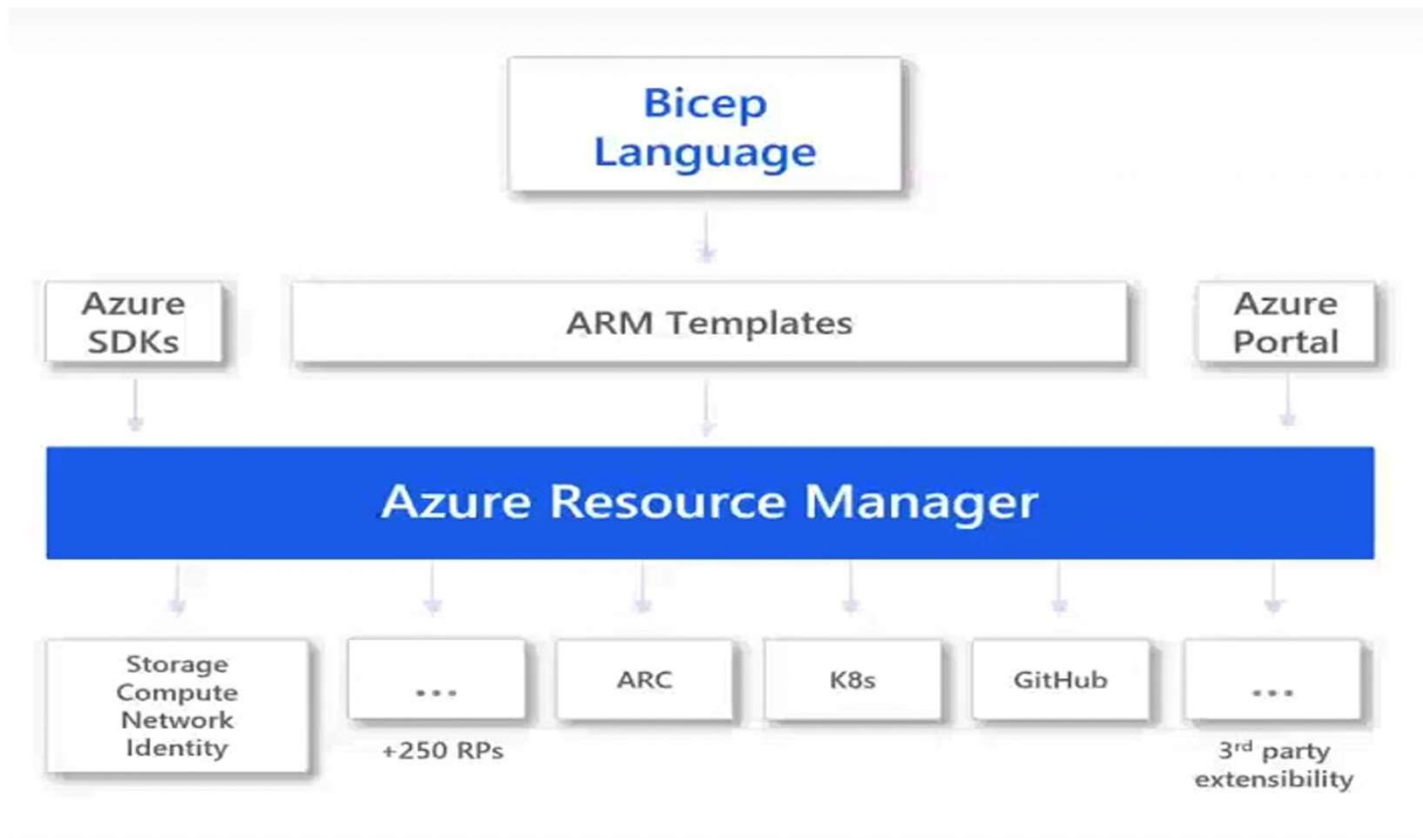

What is Azure Bicep?

- DSL for deploying Azure resources
- Transparent abstraction over ARM and ARM templates
- Simple way to author Azure resources
- Transpiled to standard ARM Template JSON files

Relationship between Bicep and ARM templates

Why Bicep language?

- Easy to understand and maintain
- Day one support
- Transparent abstraction
- Awesome tooling in VS Code
- Clean code syntax
- Code re-use and modularity
- Deep integration with Azure
- Preflight validation
- No state management
- Production support

Azure Bicep evolution in 2021

- Started as alpha version in 2020
- Supported version: v0.3.1
- Latest version: v0.4.1008
- Expected version EOY: v0.5
- Stable version v1.0 by 2022

```
PS C:\Work\Learn-Bicep> az bicep list-versions
[
  "v0.4.1008",
  "v0.4.613",
  "v0.4.451",
  "v0.4.412",
  "v0.4.63",
  "v0.4.1",
  "v0.3.539",
  "v0.3.255",
  "v0.3.126",
  "v0.3.1",
  "v0.2.328",
  "v0.2.317",
  "v0.2.212",
  "v0.2.59",
  "v0.2.14",
  "v0.2.3",
  "v0.1.226-alpha",
  "v0.1.223-alpha",
  "v0.1.37-alpha",
  "v0.1.1-alpha"
]
```

How to start with Bicep?

- [Install Azure PowerShell](#)
- [Install Azure CLI on Windows](#)
- [Install Azure CLI on Linux](#)
- [Install Azure CLI on macOS](#)

Quick look into Bicep concepts

Parameters

```
samples > parameterized-storage.bicep > storageSKU
1 // parameterized-storage.bicep
2 @minLength(3)
3 @maxLength(24)
4 param storageName string
5
6 @allowed([
7   'Standard_LRS'
8   'Standard_ZRS'
9 ])
10 param storageSKU string = 'Standard_LRS'
```

Template function and Variables

```
param azureRegion string = resourceGroup().location

var uniqueStorageName = '${storageName}${uniqueString(resourceGroup().id)}'
```

Modules

```
resource computeRg 'Microsoft.Resources/resourceGroups@2020-06-01' = {
  name: concat('bicep-azglobal-compute-v1-', azureRegion)
  location: azureRegion
}

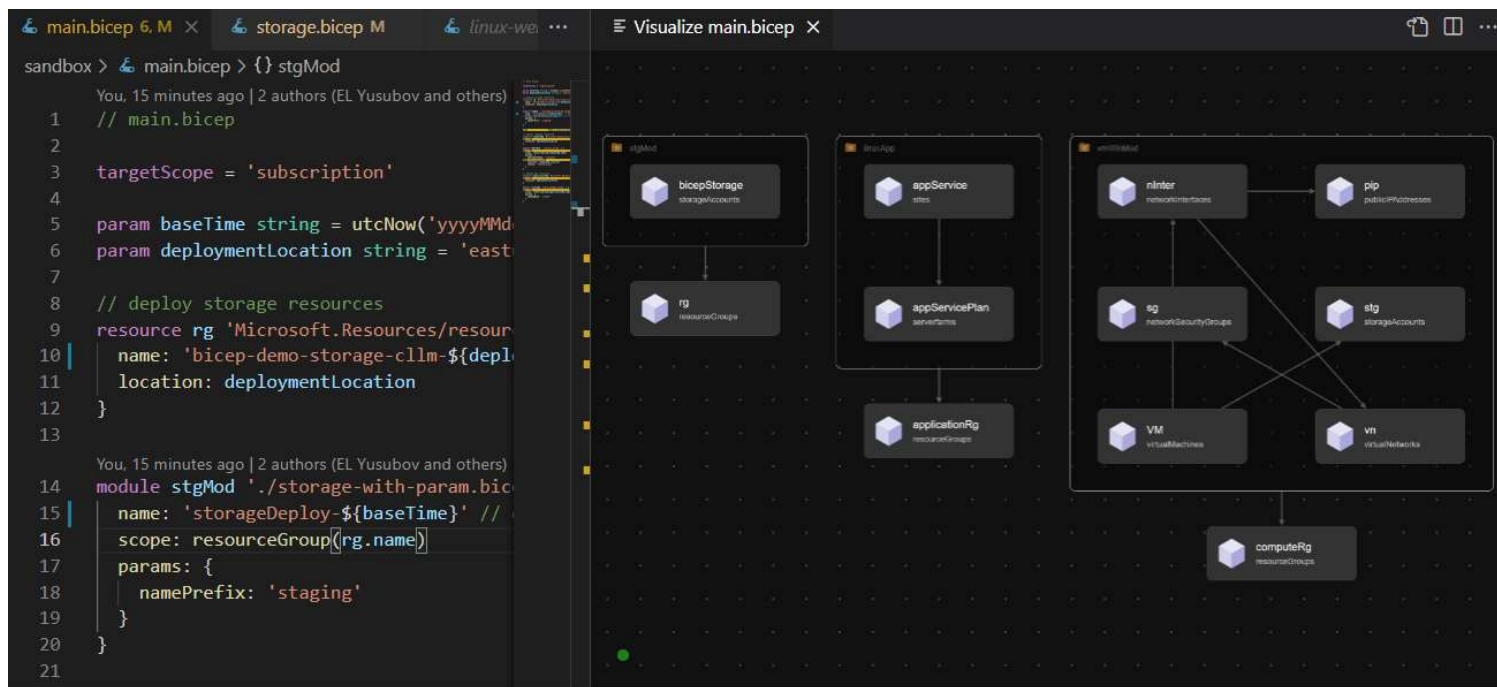

var computeDeployment = 'vmLinuxDeploy'
var uniqueComputeDeployment = '${computeDeployment}${uniqueString(computeRg.id)}'

module vmWinMod './linux-vm.bicep' = [
  name: uniqueComputeDeployment
  scope: resourceGroup(computeRg.name)
  params: {
    adminUsername: 'azureuser'
    vmSize: 'Standard_B2s'
    vmName: 'myLinuxVm'
  }
]

resource databaseRg 'Microsoft.Resources/resourceGroups@2020-06-01' = {
  name: concat('bicep-azglobal-database-v1-', azureRegion)
  location: azureRegion
}
```

Bicep file visualizer

Visualized Bicep file resources

Demo 1 – Azure Bicep on VS Code

Quick starter Azure Bicep demo repo

 Elyusubov update demo script file names 6f97f3f 10 minutes ago 22 commits

📁 .vscode	add firewall deployment with template file	21 hours ago
📁 modules	rename deployment file names, add vm deployment	22 hours ago
📁 param-files	add firewall deployment with template file	21 hours ago

📄 README.md	update content for Readme file	24 minutes ago

 README.md 

Learn Bicep is a simple, yet powerful step-by-step learning guide with samples

This project is created to check bicep file compilations into the ARM templates. Focus is on performing simple and complex IaC provisioning through authoring ARM templates via Bicep language. Next goal is to author Security as Code (SaC) via Azure security resources.

Badges

License 

To get running the samples do the following in Vs Code env:

- Fork the branch (aka, starting from obvious :)

Azure Security resources

- Resource locks
- Azure Policy
- Azure Firewall
- Data protection
- Security Monitoring
- Network Security
- Logging and auditing, etc.

Demo 2 – Defining security policies

Deploying the security definitions, policies and locks

```
TERMINAL  DEBUG CONSOLE  PROBLEMS  OUTPUT

PS C:\Work\Bicep-Starter> az deployment sub create --location eastus2 --template-file .\samples\custom-locations.bicep
The system cannot find the path specified.
Please provide string value for 'policyEffect' (? for help):
[1] Audit
[2] Deny

    ],
    "duration": "PT1.6436266S"
  }
}
```

Demo 3 – Real world deployment scenarios

Modular deployment, parameterization & decompile

A screenshot of the Visual Studio Code editor interface. On the left, the Explorer sidebar shows a file tree with folders like 'LEARN-BICEP', 'modules', 'param-files', 'samples', and 'scripts'. The 'modules' folder is expanded, showing files like 'storage-param.bicep' (selected), 'storage.bicep', and 'vm-win.bicep'. The main editor area displays the content of 'storage-param.bicep'. The code defines a parameter 'namePrefix' with allowed values, a parameter 'namePrefix' with a default value, a parameter 'paramStorageName' with a description and constraints, a variable 'stgName' derived from 'paramStorageName', a parameter 'geoRedundancy', and a resource 'storageAccount' of type 'Microsoft.Storage/storageAccounts@2021-02-01' with properties 'name' and 'stgName'.

```
modules > storage-param.bicep > namePrefix
You, seconds ago | 1 author (You)
// storage.bicep
1
2
3 @description('The prefix that will appear infront of storage account name.')
4 @allowed([
5 | 'c1l121'
6 | 'test21'
7 | 'dev21'
8 | ])
9 param namePrefix string = 'c1l121' You, seconds ago • Uncommitted changes
10
11 @description('The storage account name.')
12 @minLength(3)
13 @maxLength(24)
14 param paramStorageName string = '${namePrefix}${uniqueString(resourceGroup().id)}'
15 var stgName = toLower(paramStorageName)
16
17 @description('The flag that indicate need for a geo-redundant storage.')
18 param geoRedundancy bool
19
20 resource storageAccount 'Microsoft.Storage/storageAccounts@2021-02-01' = {
21   name: stgName
```

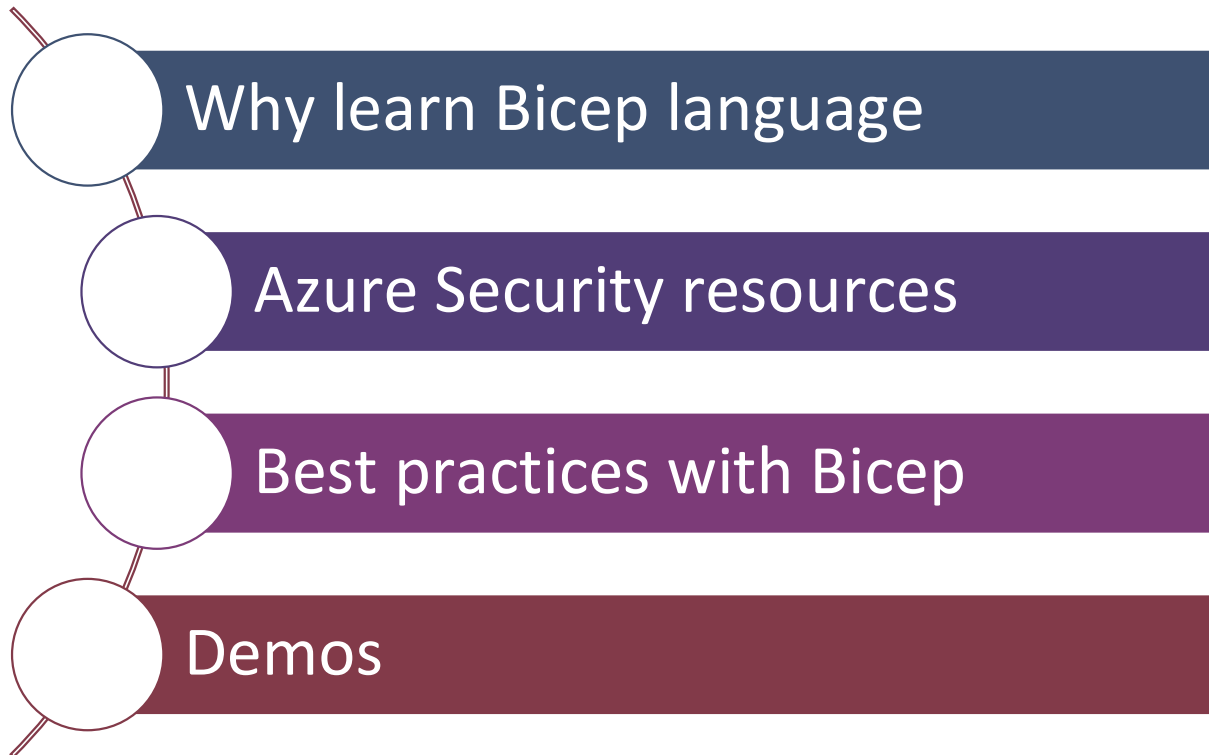

Demo 4 – Azure Key Vault integration

Securing and managing sensitive information

```
21
22 resource kv 'Microsoft.KeyVault/vaults@2019-09-01' existing = {
23   name: kvName
24   scope: resourceGroup(subscriptionId, kvResourceGroup )
25 }
26
  You, 6 minutes ago | 1 author (You)
27 module sql '../modules/sqlldb.bicep' = {
28   name: 'deploySQL'
29   params: {
30     sqlServerName: sqlServerName
31     location: 'eastus2'
32     adminLogin: adminLogin
33     adminPassword: kv.getSecret('ExamplePassword')
34   }
35 }
36
```
